Gibson 

Electric Bass Series

Gibson originated the violin shaped electric bass. And since that time Gibson has gone on to develop a complete range of basses to fit every variety of music played today.

One of today's most innovative artists, Les Paul, helped Gibson create two of today's most innovative basses, the Les Paul Triumph and Signature. The Triumph actually lets the musician "mix" his own sound. And the Signature Bass is another favorite among recording musicians with features for both, the studio guitarist and the studio engineer.

Gibson's Ripper is one of today's most exciting new instruments. Immediately after its introduction, this bass became the choice of some of today's most highly acclaimed artists.

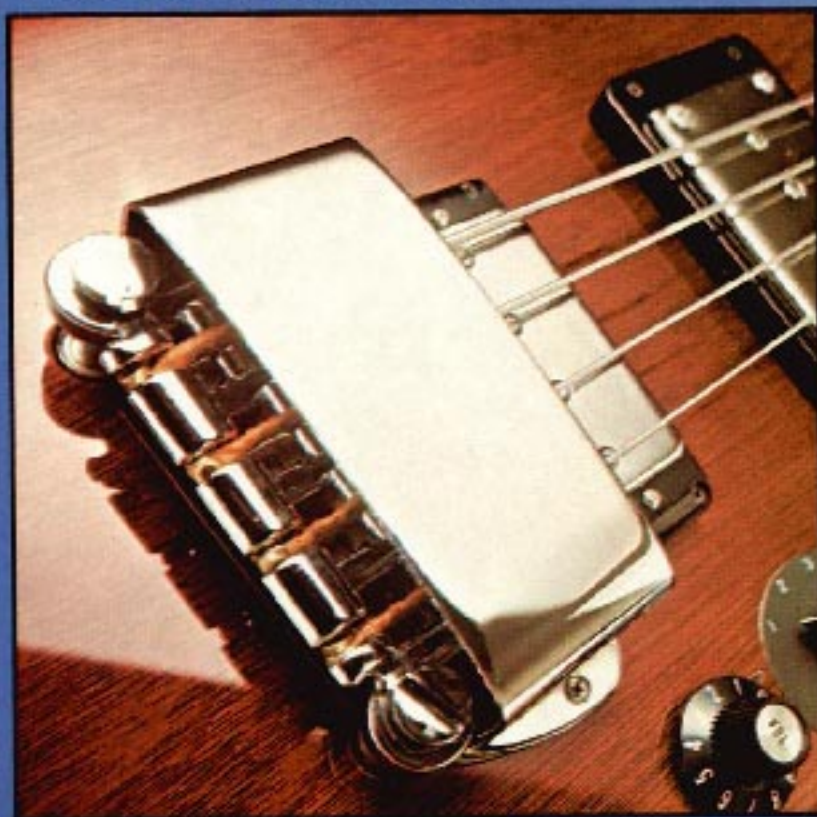

Now, Gibson forges still more frontiers with the Grabber, another superb new bass design. It's full of flexibility so the artist can choose his own personal playing action as well as his personal sound with a patented sliding pickup. And Gibson offers a tried and true performer with its time proven EB-3. This bass has consistently been a favorite among leading jazz, rock and blues artists alike.

Every Gibson bass is different from every other bass that's ever been made. But, after all, every musician is different too.

Q SYSTEM—The Q System offers a wide variety of sounds at a moment's notice with its four-position tone switch plus separate tone, midrange and volume controls and these controls are positioned for easy location.

HUMBUCKING PICKUPS AND HANDREST—Two powerful Humbucking bass pickups have just enough treble added to give Gibson basses a full, crisp punch. The handrest covers the tune-o-matic bridge so Gibson basses are a real comfort to hold.

THIN, HOLLOW BODY WITH "F" HOLES—The Les Paul Signature Bass has one of the most unique sounds today in its thin, hollow body construction with precision "f" holes. This design delivers a rich, full tone that no other bass can offer.

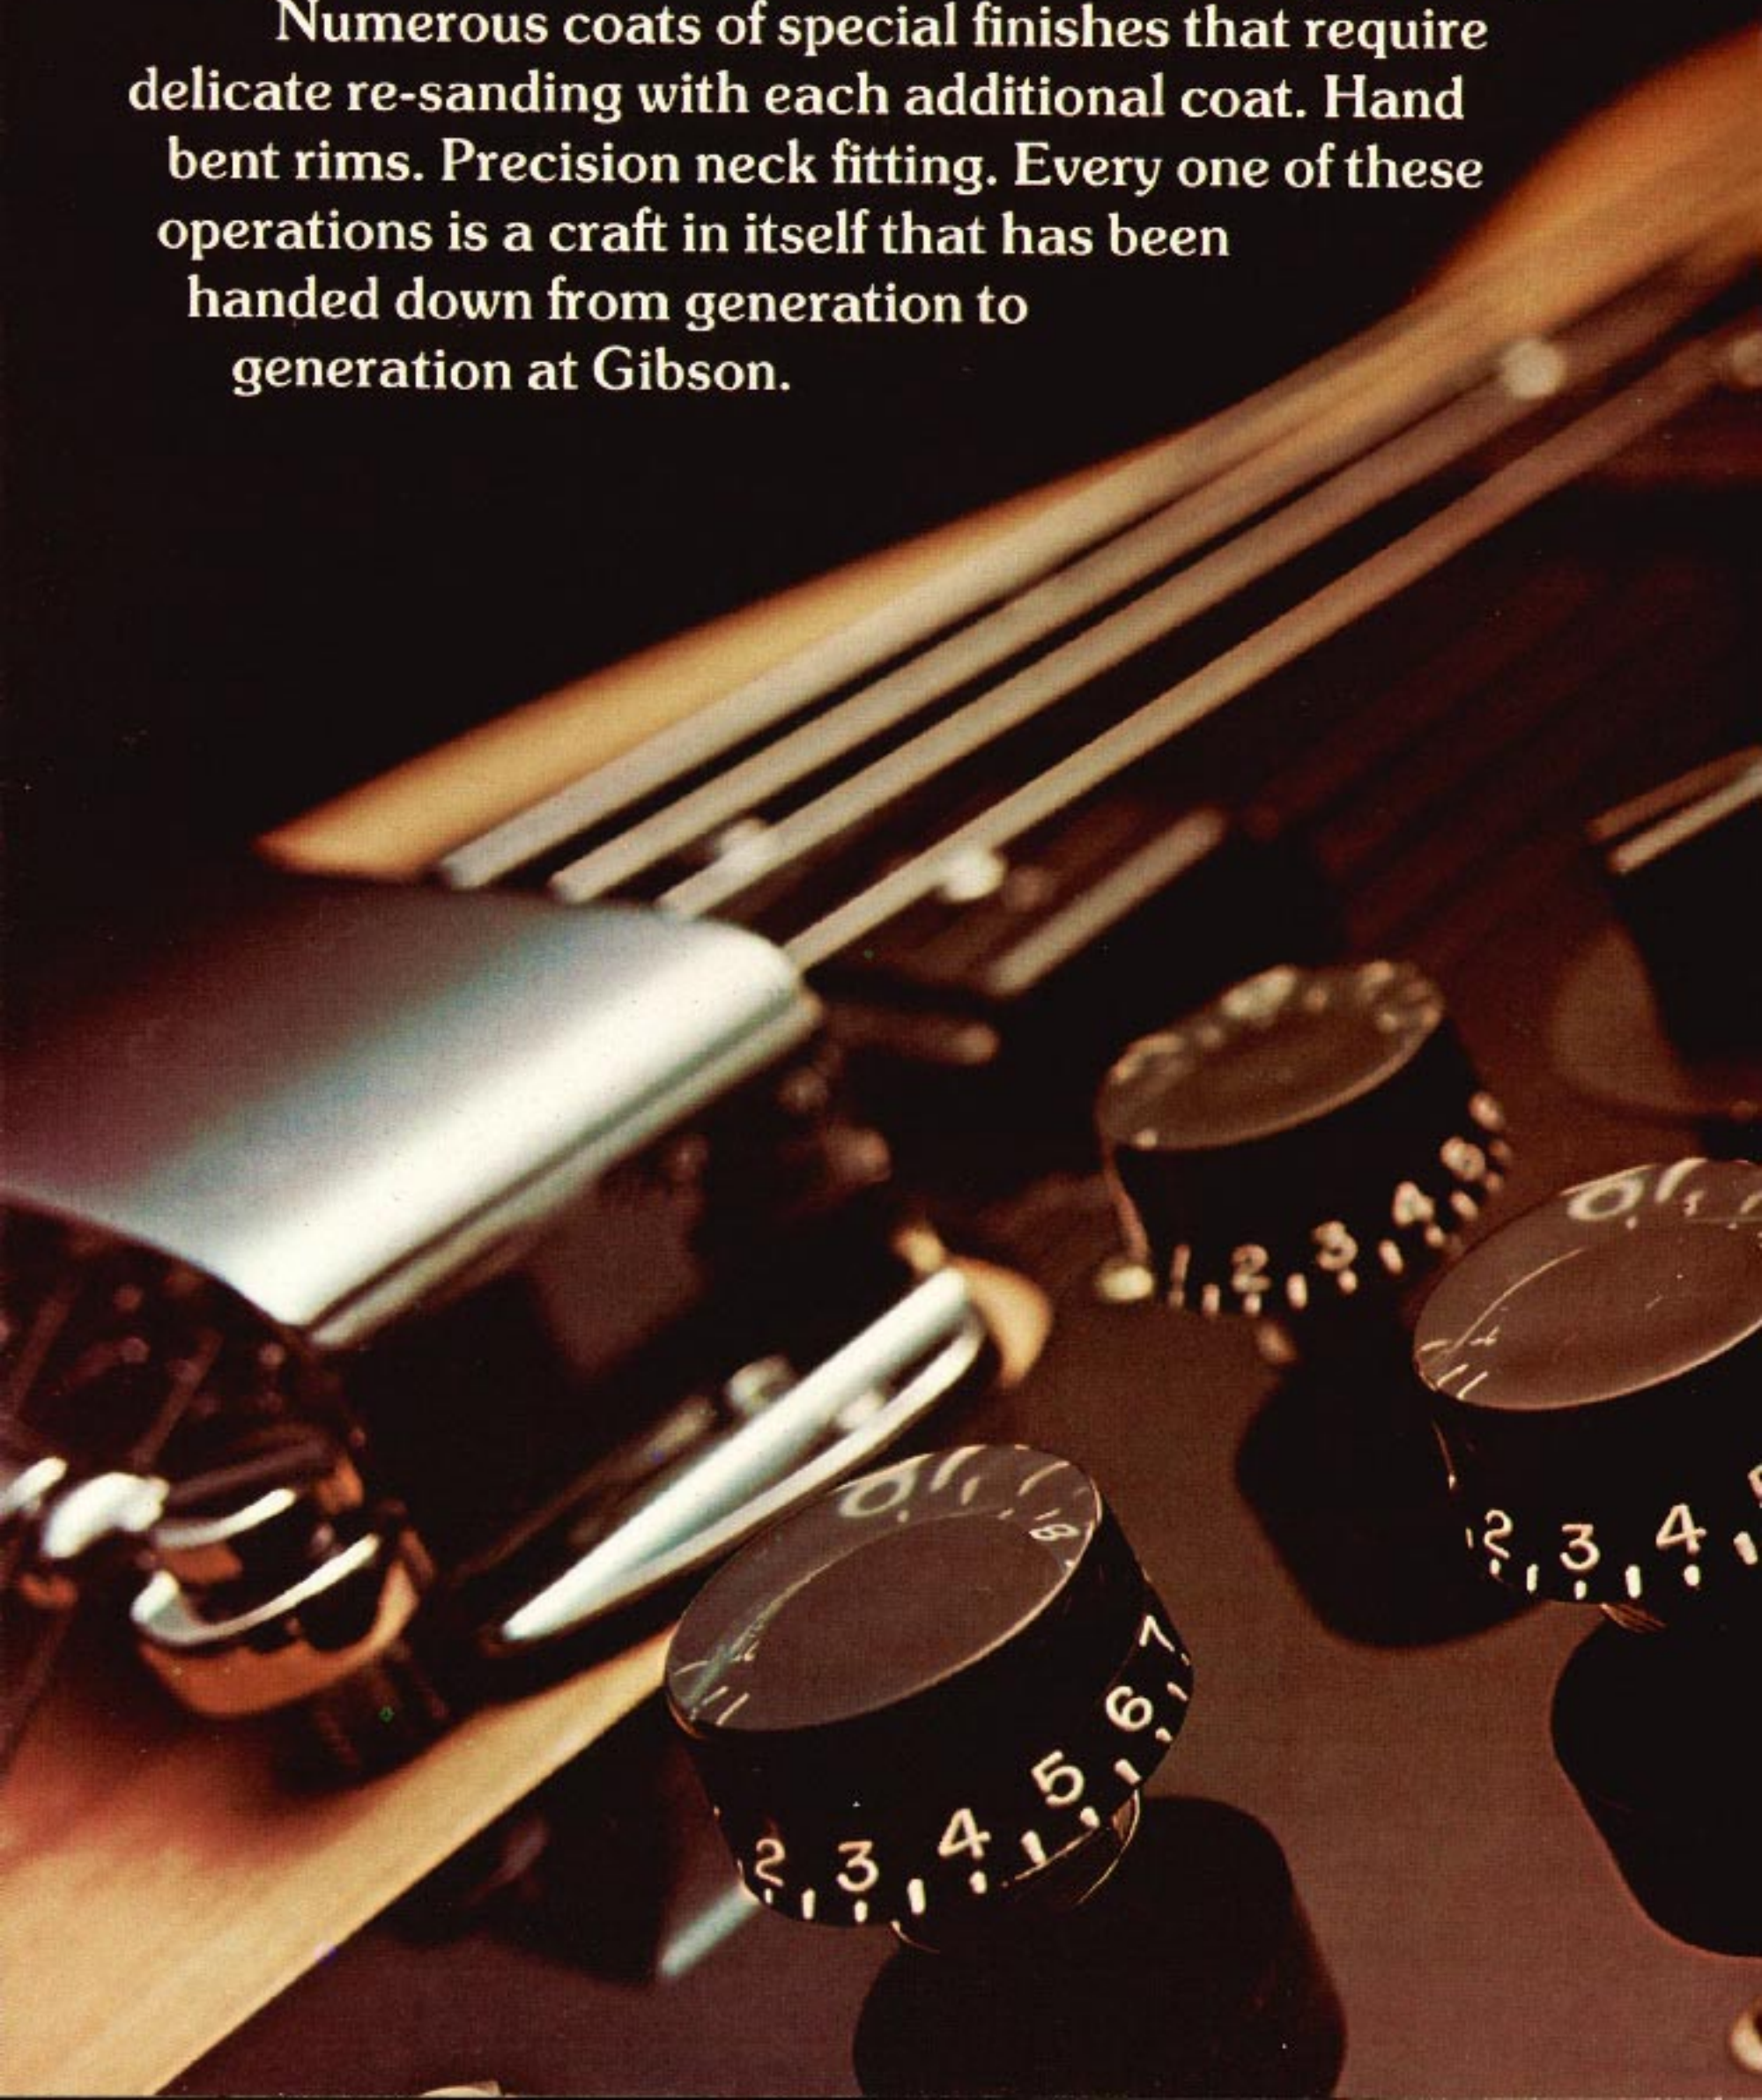

SLIDING PICKUP—The Grabber's sliding pickup offers a wide variety of sounds. Slide it forward for a deep rhythm roar, backward for a full treble punch or slide it anywhere in between.

History repeats itself every time a Gibson guitar is made.

Only a company with such a long history of craftsmanship, like Gibson, can put so much traditional skill and knowledge into every instrument it makes.

Hand carved tops and backs. Multiple body binding.

Numerous coats of special finishes that require delicate re-sanding with each additional coat. Hand bent rims. Precision neck fitting. Every one of these operations is a craft in itself that has been handed down from generation to generation at Gibson.

BODY SPECIFICATIONS

Solid alder body with contoured shape ■ Double cutaway design ■ 3-point adjustable tune-o-matic bridge with handrest ■ Combination tailpiece (strings enter through body or connect at end of bridge) ■ Two Gibson "Super Humbucking" pickups ■ Master volume mid-range and treble roll-off controls ■ 4-position transfer switch for multiple tonal changes ■ Available in Natural or Ebony body finish ■ Body size: Length 21½", width 14½", depth 1¼"

It only follows that
the world's finest guitars
are made with the world's finest parts. That's why
Gibson's genuine replacement parts are almost as
highly acclaimed as the instruments they
make up. Humbucking pickups, stop tailpieces, tuning pegs,
control knobs . . . they're all the best you can get, and
you can get them all from Gibson.
